colon cancer; dural metastasis; subdural hematoma

Summary
We report a case of acute subdural hematoma as the first manifestation of colon cancer and emphasize the need for careful assessment and consideration of clinical and radiological data for patients with nontraumatic subdural hematoma.

1. Introduction
Nontraumatic subdural hematomas are mostly caused by vascular disorders, coagulopathies, intracranial hypotension, and meningitis. Subdural hematoma resulting from neoplastic invasion of the meninges or pachymeningitis carcinomatosa is rare. We herein report a case of spontaneous subdural hematoma as the first manifestation of colon cancer, with a literature review of subdural hematoma in this setting.

2. Case report
A 64-year-old woman with underlying hypertension and atrial fibrillation was presented at our emergency department with a 6-day history of progressive dull headache and dizziness. She and her family denied any recent history of trauma. She had been receiving anticoagulation therapy with warfarin for chronic atrial fibrillation. The results of
