Tajen Junior College of Pharmacy

## Abstract

Incorporating with the Hazard Communication System implemented by the Council of Labor Affairs of the Executive Yuan in 1992. Our school prepared all the necessary material safety and data sheets (MSDS) and labeled each dangerous and/or toxic material used in every laboratory within the school. Beside, we also established a checklist for all the dangerous/toxic materials stored within the laboratory for management purpose. Furthermore, we also make sure that each laboratory teacher understand the specific properties of all the dangerous/toxic materials and the necessary preventive programs through educational training. In case of emergency, we'd like to make sure that appropriate actions were taken in order to reduce the degree of harm. In order to protected students' safety and health, we arranged related courses during the first class of each semester for educational purposes.

**Key Word: Dangerous/toxic materials, Material Safety Data Sheets(MSDS)**
