ABSTRACT

This study was aimed to survey the quality of antibiotic drugs in Taiwan area to ensure the medication safety. Seventy Ampicillin were sampled from hospitals, clinics, manufacturers and importers by local health authorities in different counties from January to July, 2007. Excluding the repeated lots, 60 samples were tested by analytical methods described in Ch. P. VI, USP 29 and the original manufacture analytical method to evaluate their qualities.

The results showed that 59 samples (98.3%) met the requirements of pharmacopeia and government regulations. One Ampicillin sample failed to fulfill the dissolution test requirements and was penalized by local health authority according to Pharmaceutical Affairs Act.

Key words: Ampicillin capsules
